TEDIAL digitizes 18 years of Canal 9's history

*TEDIAL continues with its contribution for introducing digital technology in television business. Recently, in Canal 9 of Comunidad Valenciana, TEDIAL has managed with its own technology (**TD Media Process Manager**) different and important media flows in this channel for almost 20 years of history, joining with AVID, UNITY (shared storage) and iNews (news system). This integration also has become effective for broadcast subject with the **MCOM** automation and the **Media Stream** videosevers, for the insertion and broadcasting of media.*

But the integration has not been the only thing that TEDIAL has carried out in Canal 9. TEDIAL has also fulfilled the migration of the channel video library, including the automatical digitalization of video tapes (one million of clips). Four historical databases based on BRS of Canal 9 have been migrated to the digital archive system of TEDIAL, TD TARSYS. Four hundred transformation rules of the data model have been applied to 24 millions of registers.

Implantation of tapeless model in Canal 9, including migration of video library, shows TEDIAL's capability to integrate and automate the audiovisual digital technology for digital television. TEDIAL contributes for the improvement of production process and making deployment periods shorter.

About Tedial.

Tedral, Tecnologías Digitales Audiovisuales, is a 100% Spanish company that focuses its work on the development of R+D+I products in audiovisual technologies sector, bringing custom-made solutions of digitizing, cataloguing and archive, using its own technology.
