

TEDIAL automates TEUVE's audiovisual production.

The company TEUVE, channel factory, is one of the main suppliers of contents and services for Spanish pay-per-view TV through cable or ADSL, selling its different specialized channels to pay-per-view TV operators.

TEDIAL has applied its technology for managing audiovisual content and processes at TEUVE. TEDIAL's contribution consists of two phases:

On the first one, which TEDIAL has already carried out, material coming from different sources has been **archived**: on one hand, digitized tape material by **K2**, and, on the other, the material already digitized, supplied by different providers. At this second case, TEDIAL has done a standardization for making the format more homogeneous. Another **workflow sends the material** to be broadcasted by integration with **Peeble Beach**, automation system. Playlists are legible by this automation system, and the required media-sending to K2 is automatized too. TEDIAL has carried out the integration with **AnyStream** for automatic generation of playout copies, after the massive importation of historical material. The **tapeless solution** implemented in TEUVE **includes TEDIAL's products, such as TD TARSYS, TD MPM, TD AST and TD INDEXER.**

The second phase, which will be carried out in the following months, will consist of **installing and starting up the system** for processes control of audiovisual production, **TD FICUS**. This new product, developed by TEDIAL, allows to customize the TV production flows, and the **automatic creation of work commands for each one of the audiovisual flow production phases**. Some of these phases are ingest/digitalization, quality control, subtitling, verification of broadcast regulations, editing and versioning. TD FICUS[®], as the rest of TEDIAL products, is **based on web services technology**, ensuring its integration with other applications, as in TEUVE's case.

About Tedial.

Tedral, Tecnologías Digitales Audiovisuales, is a 100% Spanish company that focuses its work on the development of R+D+I products in audiovisual technologies sector, bringing custom-made solutions of digitizing, cataloguing and archive, using its own technology.
